Art Unit: 2152

1. The drawings are objected to because of the informalities noted in the attached form PTO-948. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objections to the drawings will not be held in abeyance.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 21-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Perkins, US Pat. No. 5,159,592 in view of Higgins, US Pat. No. 5,953,350.

3. As to claims 21-23, Perkins teaches a computer program product, computer data signal embodied in a carrier wave and a method comprising the steps of:

- a. receiving the current network protocol address of a process coupled to the network (col. 2, line 62 – col.3, line 38 and col. 4, line 49 – col. 5, line 49);
- b. receiving an identifier associated with said one process (col. 5, lines 52-65);
- c. receiving a query for one of the network protocol address and the associated identifier of said one process from another of the processes over the computer network (col. 4, line 49 – col. 6, line 57); and

Art Unit: 2152

d. providing one of the network protocol address and the associated identifier of said one process to a said another process over the computer network, if the said one process is connected to the computer network (col. 6, line 20 – col. 7, line 2 and col. 8, line 30 – col. 9, line 26).

However, Perkins does not explicitly teach a point-to-point connection. In the same field of endeavor, Higgins teaches establishing a point-to-point. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have incorporated the point-to-point connection as taught by Higgins into the system of Perkins in order to increase reliability and efficiency of the system.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
